ELSEVIER

ISA Transactions, Vol. 36, No. 4, pp. 359–361, 1997
Published by Elsevier Science Ltd
Printed in The Netherlands

Cumulative contents of Volume 36

Volume 36, Number 1, January 1997

1 Editorial viewpoint
3 Inverted decoupling: a neglected technique
H.L. Wade
11 Two-point boundary temperature control of hot strip via water cooling
N.S. Samaras and M.A. Simaan
21 PLC or DCS: selection and trends
J. La Fauci
29 Measurement uncertainty models
R.H. Dieck
37 Network security considerations in TCP/IP-based manufacturing automation
M.S. DePriest
49 Using advanced optical multiple-access techniques in high-speed avionic local area networks for future aircraft applications. Part I: optical code-division multiple-access networks
J.-G. Zhang
65 Using higher order CMAC to improve the performance of control valves
S. Alcozer, J.P. Segovia and D. Sbarbaro
71 Designing a standard thermal power plant for daily startup/shutdown: the HP Bypass control and safety function
H.W. Byeon and J.L. Ulrey

Volume 36, Number 2, April 1997

79 Editorial viewpoint
81 Issues in the use, design and evolution of process scheduling and planning systems
G. Applequist, O. Samikoglu, J. Pekny and G. Reklaitis
123 Formal specification methods in engineering design
D.V. Boriani
131 Object-oriented development of control software
D.V. Boriani
139 On direct PID controller tuning based on finite number of frequency response data
K. Natarajan and A.F. Gilbert
151 Real time validation of on-line measurements utilizing internal standard introduction
J.G. Converse

Volume 36, Number 3, July 1997

159 Editorial viewpoint
161 SAP-R/3 in process industries: expectations, experiences and outlooks
A. Schumann

167 On-line calibrated measuring systems and their characteristics
I.G. Bluvshtein
183 A new set of controller tuning relations
A. Abbas
189 Organizing for an initial implementation of S88
P.R. Nelson and R.S. Shull
197 Batch object modeling and language
E.H. Bristol
209 Configuration techniques for a validated plant
T.E. Crowl and L.C. Minnich Jr
219 Lack of planning in alarm system configuration is, in essence, planning to fail
C.S. Connelly

Volume 36, Number 4, September 1997

227 Editorial viewpoint
229 Integration of ERP to the final control elements
R. Kappelhoff
239 Plant information at the desktop-exploiting corporate IT infrastructure
R. Bolton
249 Process model and recipe structure, the conceptual design for a flexible batch plant
H.K. Bastiaan
257 Sharing engineering design knowledge and delivering proven practices in engineering organizations
P.A. Jokinen
267 Key factors for successfully implementing advanced control
F.F. Sanders
273 A novel tuning strategy for multivariable model predictive control
R. Shridhar and D.J. Cooper
281 Industrial Model Predictive Control technology as applied to continuous polymerization processes
P.D. Schnelle and D.L. Rollins
293 Accurate simplistic predictive modeling of nonlinear dynamic processes
D.K. Rollins, J.M. Liang and P. Smith
305 Applications and benefits of real-time I/O simulation for PLC and PC control systems
D.J. Dougall
313 Calculating process control parameters from steady state operating data
S. Ochiai
321 Using advanced optical multiple-access techniques in high-speed avionic local area networks for future aircraft applications. Part II: Optical time-division multiple-access networks
J.-G. Zhang
339 Using an object-oriented database as a repository for process configuration data
A.P. Dove, L.O. Jundt and J.M. Lucas
345 How diagnostic coverage improves safety in programmable electronic systems
W.M. Goble, J.V. Bukowski and A.C. Brombacher

351 The new current loop: NASA's successor to the Wheatstone bridge
K.F. Anderson
357 Author index of Volume 36
361 Cumulative contents of Volume 36
